KOLKATA, WEST BENGAL

LinkedIn [linkedin.com/in/himon9](https://www.linkedin.com/in/himon9)

SUMMARY

Cybersecurity professional with experience in SIEM, EDR, and AI threat evaluation, specializing in threat hunting, automation, and enterprise risk mitigation. Passionate about advancing research in information security, regulatory compliance, and trustworthy AI.

EDUCATION

Bachelor of Technology in Computer Science, Heritage Institute of Technology, India (GPA:3.79) *September 2020 - June 2024*

- Coursework in Computer Networks, Operating Systems, Software Engineering, Database Managements Systems
- Achieved 3rd rank in the Computer Science department (378 students)
- B.Tech Project: “Implementing Large Language Model using Transformer Architecture”

WORK EXPERIENCE

Risk Advisory Associate in Cyber Defense, [Grant Thornton Advisors LLC](#), Kolkata, India *July 2024 – present*

Skills: Exabeam SIEM (EQL), Microsoft Sentinel (KQL), CrowdStrike Falcon EDR, Azure Logic Apps, Microsoft Purview

- Delivered “Managed Security Service Provider” support in shifts for clients across healthcare, finance, energy, and insurance sectors, triaging 20–30+ alerts daily through IOC-based investigations, and reduced false positives by 25%.
- Developed and implemented custom correlation rules in Exabeam SIEM using EQL, leveraging latest CVEs to detect zero-day attacks and prevent exploitation in client environments, reducing undetected attack vectors.
- Led 10+ weekly threat hunts in Exabeam across client environments, extracting IOCs/TTPs from OSINT and remediated critical endpoint threats in CrowdStrike Falcon within 1-hour SLA.
- Automated Microsoft Sentinel threat hunting with Azure Logic Apps, reducing query execution and reporting time by 95% and enabling teams to run 50+ KQL queries per session with zero manual effort.
- Automated cookie consent validation for 200+ OneTrust websites using Selenium, cutting manual effort by 90% and completing checks in under 20 minutes to boost compliance monitoring efficiency.
- Optimized CRM data retrieval from Microsoft Dynamics 365 using XrmToolBox and Dataverse, cutting query execution time by 40% and processing 750+ records under 1 minute, accelerating client reporting.
- Evaluated client LLMs for bias, hallucination, and safety using the Moonshot AI toolkit, collaborating with cross-functional teams to benchmark performance, and provided actionable insights for trustworthy AI deployment.
- Tested Azure OpenAI against OWASP LLM vulnerabilities, mapped controls to EU AI Act, and provided actionable recommendations on prompt injection, data leakage, and output handling to strengthen enterprise AI security.

Consulting Engineer Intern, [Caravel Labs](#), Seattle, Washington (Remote) *June 2023 – August 2023*

Tech Stack React, Figma, Next JS, Typescript, Cosmos DB, Azure

- Pioneered collaboration within a 10+ member team on an international library project, dedicated to supporting education for underserved communities and children (aged 9-15).
- Transformed Figma design into a responsive React front-end using Typescript, creating an empathetic UI for the library project with optimal user experience on both mobile and desktop. Achieved 30% efficiency gain through reusable components.
- Revamped the entire codebase, implementing the MVVM architecture to enhance security and streamline integration; Optimized database queries and reduced API response time by 50% and improved overall app performance.
- Created storage and assessed a schema for tracking borrowed and returned books. Ensured efficient book management for a user base of 200-300 children and a large collection of ~7,000 books.
- Designed an AI recommendation system utilizing regression analysis on the reader’s borrowing history and feedback, achieving a remarkable 92% accuracy.

Machine Learning Intern, [Centre for Development of Advanced Computing](#), Kolkata, India (Onsite) *April 2023 – July 2023*

Tech Stack Python, Django, AWS EC2, S3, TensorFlow, PyTorch

- Spearheaded a cloud-based web app using Django and AWS (S3 bucket, EC2) for maize grain image uploads. Implemented Nginx for routing protocols, ensuring uninterrupted traffic flow via a public IPv4 address.
- Efficiently annotated nearly 2,000 maize grain images using RoboFlow, leveraging polygon shapes for accurate quality parameter identification and labeling. Utilized automated selection tools to expedite annotation and enhance accuracy.
- Conducted thorough evaluation of image segmentation libraries (YoloV8, Detectron2) to detect 6 maize grain classes.
- Refined hyperparameters through cross-validations, resulting in a high 96% confidence score for accurate detection of diverse maize grain classes in mixed-type images.

Certifications & Honors

- Azure Fundamentals (AZ900), Security Operations Analyst (SC200), Information Protection Administrator (SC400) certified
- Awarded multiple quarterly ‘Excellence’ awards for consistently delivering outstanding client engagement and performance
